

Offline-selected models can become deployed-suboptimal.

A. Fixed decision interface

same interface, different candidate model

Fixed interface, varying model: does offline selection transfer?

B. Winner-inversion matrix

arrows: offline-selected → deployed-utility winner; counts: deployed-suboptimal cases

	$\kappa = 0.00$	$\kappa = 0.50$	$\kappa = 1.00$
Event-micro	Sharp → Sharp 38/100	Sharp → Calib. 69/100	Sharp → Smooth 99/100
Traffic-Hourly Top-k	Short → Short 0/100	Short → Smooth 100/100	Short → Smooth 100/100
Inventory	MLP → MLP 23/100	MLP → MA(7) 74/100	MLP → MA(7) 99/100
	same or mixed	winner shift	recurrent mismatch
